The intent of this book is to provide the interior design student a well-rounded knowledge of Autodesk Revit tools and techniques. These skills can then be applied to enhance professional development in both academia and industry. To further enhance this book, the author has created numerous videos that demonstrate exactly how to use many of the most commonly used tools in Revit. The overall premise of the book is to learn Revit while developing the interior of a two story law office. The reader is provided an architectural model with established columns, beams, exterior walls, minimal interior walls and roofs in which to work. This allows more emphasis to be placed on interior design rather than primary architectural elements. The chapters chronology generally follows the typical design process. Students will find this book helps them more accurately and efficiently develop their design ideas and skills. The first chapter introduces the reader to Revit, Building Information Modeling (BIM) and the basics of opening, saving and creating a new project. The second provides a quick introduction to modeling basic elements in Revit including walls, doors, windows and more. This chapter is designed to show students how powerful Revit is and hopefully make them more excited about learning it. The remainder of the book is spent developing the interior space of the law office with an established space program. A student will learn how to view and navigate within the provided 3D architectural model, managing and creating materials and develop spaces with walls, doors and windows. Once all the spaces are added to the model, several areas are explored and used as the basis to cover Revit commands and workflows. At the end of this tutorial, the reader will be able to model floor finishes, ceilings with soffits,

The AUBIN ACADEMY MASTER SERIES: AUTOCAD ARCHITECTURE 2011 explains the process of creating professional-quality building design projects using the newest release of AutoCAD Architecture Using a project-based approach, this text goes beyond a simple rundown of tools and commands to focus on the rationale and practicality of the software through life-tested, practical lessons that emphasize the why as well as the how in order to help students complete their projects successfully. Text and lessons combine to deliver a clear sense of the value of the tools introduced as well each tool's potential. The result is a fully up-to-date resource that shortens the learning curve and builds confidence and comfort in using the software as a tool to create architecture. The "Red Book" presents a background to conventional foundation analysis and design. The text is not intended to replace the much more comprehensive 'standard' textbooks, but rather to support and augment these in a few important areas, supplying methods applicable to practical cases handled daily by practising engineers and providing the basic soil mechanics background to those methods. It concentrates on the static design for stationary foundation conditions. Although the topic is far from exhaustively treated, it does intend to present most of the basic material needed for a practising engineer involved in routine geotechnical design, as well as provide the tools for an engineering student to approach and solve common geotechnical design problems.

Laudato Si 'is Pope Francis' second encyclical which focuses on the theme of the environment. In fact, the Holy Father in his encyclical urges all men and women of good will, the rulers and all the powerful on earth to reflect deeply on the theme of the environment and the care of our planet. This is our common home, we must take care of it and love it - the Holy Father tells us - because its end is also ours.

BIM Demystified is a short, practical introduction to Building Information Modelling (BIM). Addressing BIM from the point of view of mainstream practice as opposed to a cutting-edge technological perspective, it offers a user-friendly yet thorough explanation of a subject which is often swamped by jargon and deluged with spin. Taking a wide view of BIM – encompassing business opportunity, Code of Conduct, cultural issues and the necessity for better legal arrangements too – the book 's chapters range from the BIM ingredients (including objects, parametrics, and standards), to the business case for BIM and how to implement it. BIM requires a shift in attitudes if its benefits are to be obtained – and this book will allow individuals at all levels in any practice to build a firmer understanding of the merits and wider application of the subject. It brings together both managers and technologists within
