Curriculum guide for economics education in grades 9-12 based on Economics America from the National Council on Economic Education.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

"A connection between Thatcherite and Reaganite domestic policy is often assumed by historians. The two political leaders are commonly viewed in the same 'New Right' context. Yet, although there was an alignment - and this study shows how the two administrations cited developments across the Atlantic in justification of their respective policy agendas - it is clear that this shared context was often only in terms of rhetoric and presentation rather than in policy. In this ground-breaking study, containing over thirty interviews with key protagonists, James Cooper explores a more complex relationship between Margaret Thatcher and Ronald Reagan in the 1980s; he reveals the strengths and weaknesses of their political bonds, and shows that their fortunes, whilst in concurrent power, offered a crucial mutual validation as they sought to 'roll back the state.'"--P. This book examines the process and consequences of telecommunications liberalisation in the context of an ever closer European Union. The creation of a single market for telecommunications and of a wider European single market mirror one another. Telecommunications are also something of a test case for the privatisation process, as this sector has traditionally been a state monopoly. The volume approaches the European experience from three angles: * the politics of regulation and the process of liberalisation in the EU (including case studies of the UK, France, and Germany) * increasing global economic interdependence makes international comparisons essential, and the volume compares the EU experience with that of the Czech Republic, Israel and Thailand * the consequences of technology and continuous innovation
