This book explores ways in which libraries can reach new levels of service, quality, and efficiency while minimizing cost by collaborating in acquisitions. In consortial acquisitions, a number of libraries work together, usually in an existing library consortia, to leverage size to support acquisitions in each individual library. In cross-functional acquisitions, acquisitions collaborates to support other library functions. For the library acquisitions manager, technical services manager, or the library director, awareness of different options for effective consortial and cross-functional acquisitions allows for the optimization of staff and resources to reach goals. This work presents those options in the form of case studies as well as useful analysis of the benefits and challenges of each. By supporting each other's acquisitions services in a consortium, libraries leverage size to get better prices, and share systems and expertise to maximize resources while minimizing costs. Within libraries, the acquisitions function can be combined with other library functions in a unit with more than one purpose, or acquisitions can develop a close working relationship with another unit to support their work. This book surveys practice at different libraries and at different library consortia, and presents a detailed description and analysis of a variety of practices for how acquisitions units support each other within a consortium, and how they work with other library units, specifically collection management, cataloging, interlibrary loan, and the digital repository, in the form of case studies. A final section of the book covers fundamentals of collaboration.

In the civilised world there are enough raw materials, machinery, labour and scientific knowledge to satisfy the needs of all the inhabitants. Poverty and hunger exist because people have not enough money to buy all the output of modern civilisation at a fair price to the producers. When there is a shortage of anything the most obvious remedy is to create some more and there is no real difficulty in creating more money. PROMISE TO PAY shows how this should be done when money is backed by goods and services. The creation of money should be in the hands of the State or Head of Government and not in the hands of private banking. The state would issue sufficient money to enable the buying power to keep pace with production. Paper money issued by banks is not real money but "Promise to Pay" money and the amount in circulation bears little relation to the amount of goods and services available. When there is less money than goods, people go short of food and clothes. When there is more money than goods prices rise and people pay more and more for less and less.
