This practical guide briefly covers the historical and epidemiological background of palliative care and the growth of palliative medicine as a speciality, before dealing with major physical, psychological, spiritual, and symptom management issues from diagnosis to bereavement care.

The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the Oxford Textbook of Palliative Care for Children brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.
